

KUNAL SAINI

Data Scientist | GenAI & Agentic AI Engineer

Delhi, India | +91-8171206713 | kunalsaini6841@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Scientist with 3+ years of experience building GenAI, agentic AI, and classical ML systems, spanning production RAG assistants, stateful multi-agent LangGraph workflows, and cybersecurity threat detection. Delivered a production RAG assistant on LangChain, GPT-4o, and Pinecone, and an agentic multi-agent data analysis system combining LLM reasoning with deterministic, validated execution. Also built ML-based network intrusion detection achieving 97% prediction accuracy as part of a central government project on a Linux-based system. Comfortable across classical ML, deep learning, and LLM/agent engineering, with hands-on AWS deployment experience.

EXPERIENCE

Data Scientist — Silver Touch Technology, Delhi (IT solutions & digital transformation firm)

Oct 2025 – July 2026

- Engineered an ML-based DNS threat detection system (Decision Tree, Random Forest, Logistic Regression) with SHAP explainability, reducing false-positive alerts by ~25% while classifying trusted vs. suspicious DNS activity in real time.
- Built an advanced threat detection pipeline analyzing honeypot PCAP traffic via Zeek and Suricata, achieving 97% prediction accuracy for network intrusion detection across thousands of daily network flows.

Associate Data Scientist — Platify Technologies Pvt Ltd, Noida (AI & mobile-commerce product startup) June 2023 – Sept 2025

- Built a RAG-based Intelligent Financial Assistant using LangChain, GPT-4o, and Pinecone, cutting average query response time by ~35% through optimized chunking, real-time retrieval, and re-ranking for context-aware responses.
- Developed and deployed classification and regression models achieving 85–90% accuracy; automated feature engineering pipelines, cutting processing time by 40%.

KEY PROJECTS

Intelligent Financial Assistant (RAG Chatbot) | Python, FastAPI, LangChain, GPT-4o, Pinecone

- Built an end-to-end RAG pipeline in LangChain: document validation, preprocessing, chunking, embedding generation, and vector storage, scaling to support a knowledge base of 1,000+ documents.
- Evaluated retrieval and generation quality using the RAGAS framework, improving answer faithfulness score by ~20% through iteration on chunking and retrieval strategy.
- Containerized the app with Docker, built a FastAPI backend, and deployed the full system on AWS, sustaining sub-5-second average response latency in production.

Stateful Multi-Agent Data Analysis with LangGraph | Python, LangGraph, GPT-4o, SQL, Pandas

- Built an agentic AI system enabling natural-language analysis of CSV datasets (100K+ rows) through a stateful LangGraph workflow, combining LLM-driven query planning with deterministic SQL/Python execution.
- Designed a safe-validation layer to check generated SQL and Python before execution, cutting invalid/unsafe query execution by ~30%, plus persistent conversational memory so the agent maintains context across multi-turn sessions.
- Produced grounded analytical insights with interactive visualizations, keeping generation and execution decoupled so results stay auditable rather than purely LLM-generated.

Advanced Threat Detection using Honeypot PCAP Logs | Python, FastAPI, Zeek, Suricata, Malcolm, Scikit-learn

- Delivered as part of a central government project at Silver Touch Technology, deployed on a Linux-based system.
- Built an automated pipeline to analyze honeypot-generated PCAP traffic and extract Indicators of Compromise (IOCs), processing gigabytes of daily traffic using Zeek and Suricata for network metadata extraction.
- Developed an ML-based domain/URL classification system achieving ~92% classification accuracy in distinguishing trusted vs. suspicious domains from network metadata.

TECHNICAL SKILLS

Languages: Python, SQL

NLP & GenAI: LangChain, LangGraph, RAG, Agentic AI Systems, AI Agents, Prompt Engineering, LLM Fine-Tuning (PEFT/LoRA/QLoRA), HuggingFace, Pinecone, ChromaDB, GPT-4o, Gemini, LLaMA

Natural Language Processing (NLP): Text Understanding, Representation, Classification (NLTK, BoW, TF-IDF, Word2Vec, BERT, SentenceTransformer)

ML / Deep Learning: Regression, Classification, Logistic Regression, Random Forest, K-Means, PCA, ANN, LSTM, GRU, Transformers, BERT, TensorFlow, PyTorch, Keras

Cybersecurity Tools: Zeek, Suricata, Malcolm

Cloud: AWS

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, SciPy, FastAPI, Streamlit, NLTK

Dev Tools: VS Code, Jupyter, PyCharm, Git, GitHub, CI/CD Pipelines

EDUCATION

B.Tech, Computer Science and Engineering — ITS, Institute of Technology and Science, Greater Noida

2019 – 2023 | CGPA: 7.41

CERTIFICATIONS

Python Bootcamp: Zero to Hero — Udemy • The Complete SQL Bootcamp — Udemy • Machine Learning A-Z — Udemy
